

KPL Affinity Purified Antibody To Monkey IgG (γ) *Produced in Goat*

<u>Catalog No.</u>	<u>Size</u>
5210-0216 (071-11-021)	1.0 mL

DESCRIPTION

Affinity purified antibody, isolated from a pool of monospecific antiserum from goats immunized with purified Old World Monkey IgG.

FORM/STORAGE

Liquid. Store at 2-8°C prior to opening. Dilute only prior to immediate use. For extended storage, aliquot contents and freeze at -20°C. Avoid multiple freeze-thaw cycles. Stable for a minimum of 1 year from date of receipt.

STABILIZER AND PRESERVATIVE

Supplied in 0.02 M potassium phosphate, 0.15 M sodium chloride, pH 7.2. No stabilizer added. 0.01% (w/v) sodium azide added as preservative.

ANTIBODY CONCENTRATION

The concentration of affinity purified antibody is approximately 1.0 mg/mL as determined by UV absorbance at 280 nm.

SPECIFICITY/CROSS REACTIVITY

Testing by immunoelectrophoresis resulted in a single precipitin arc against anti-goat serum, monkey IgG and monkey serum. No reaction was observed against Monkey IgM or Monkey IgA. Specificity was confirmed by ELISA at less than 1% cross-reactivity against other monkey heavy or light chain isotypes. Cross reactivity will occur with closely related primates.

APPLICATIONS

Unlabeled affinity purified antibodies can be used as a primary antibody or a capture antibody in immunoassays.

SUGGESTED WORKING DILUTIONS

Optimal working concentrations should be determined experimentally. Prepare working dilution in PBS or other buffer such as KPL 10% BSA Diluent/Blocking Solution. These buffers not recommended for long term storage.

Suggested starting dilutions are as follows:
1:1000-1:15,000, depending on application.
Optimal titers should be determined in each application.
